TERMINOLOGY:

CCA/SAE (Is): Cold Cranking Amperes (CCA) is the constant discharge current in Amperes, which the battery can supply at -18°C for 30 seconds before the voltage drops below 1.2 volts per cell (7.2 volts for 12 volt battery).

Reserve Capacity (Cr.n): Is the time in minutes for which the battery can maintain a constant discharge current of 25A before the final voltage drops below 10.5 V at 25 ± 2°C.

Cn: Is the nominal electric discharge (Ah) which the battery can supply with a constant current for a period of 20 hours before the final voltage drops below 1.75 volts per cell (10.5V for 12 volt battery) at 25 ± 2°C.
